

HEMP GROW KIT

Everybody Can
Grow.

Geotextile Pot (white)
5 Gallons

Geisha Premium Soil
*Minerals are included
10KG

Takumi Fish Amino (1 litter)
Chu Fertilizer 1kg
NinjaKick Bloombooster 1kg

Premium

Seeds are not included

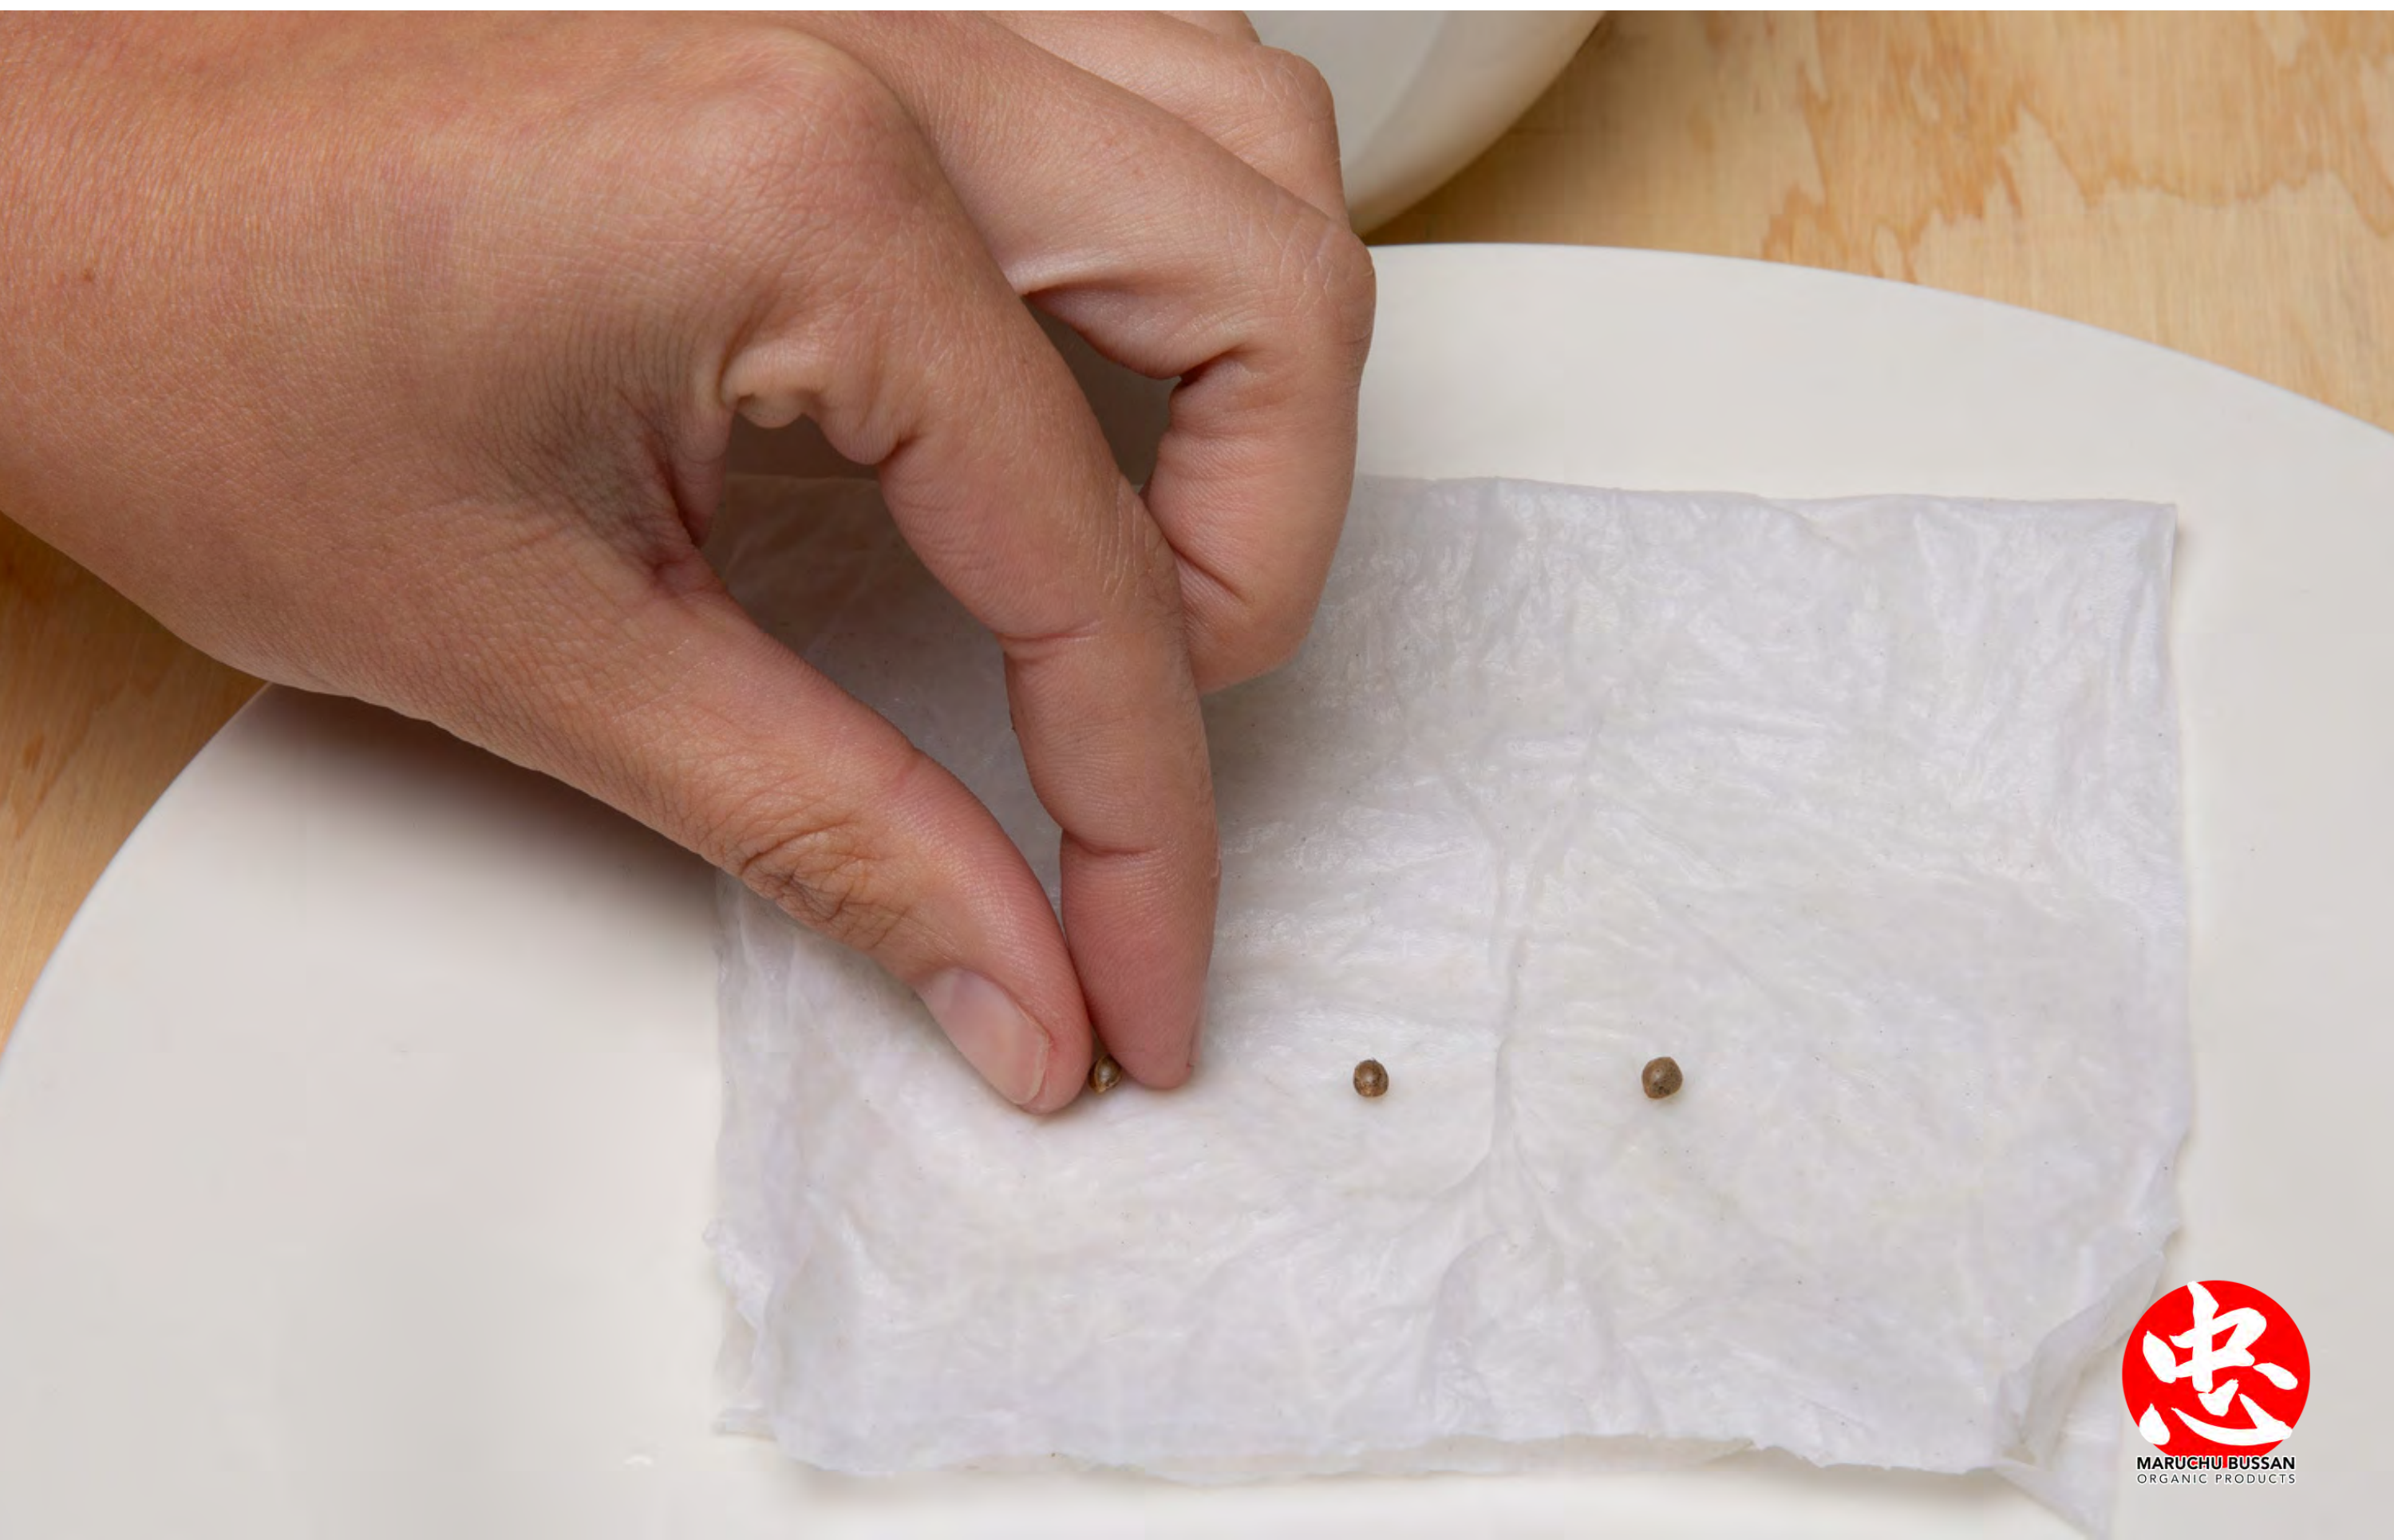

Step 1. Prepare the Soil

Put the soil in the planting bag, water and mix the soil. Cure the soil overnight before transplanting.

Step 2. Seedling

Put the seeds in warm water (40 degrees Celsius) for 30-60 minutes, then place on tissue paper. Spray with water but do not let it get too wet. Now store in a sealed box. Open and check every day, do not let the tissue dry out. It may take about 5-7 days until the seeds germinate.

Step 3. Move into pot

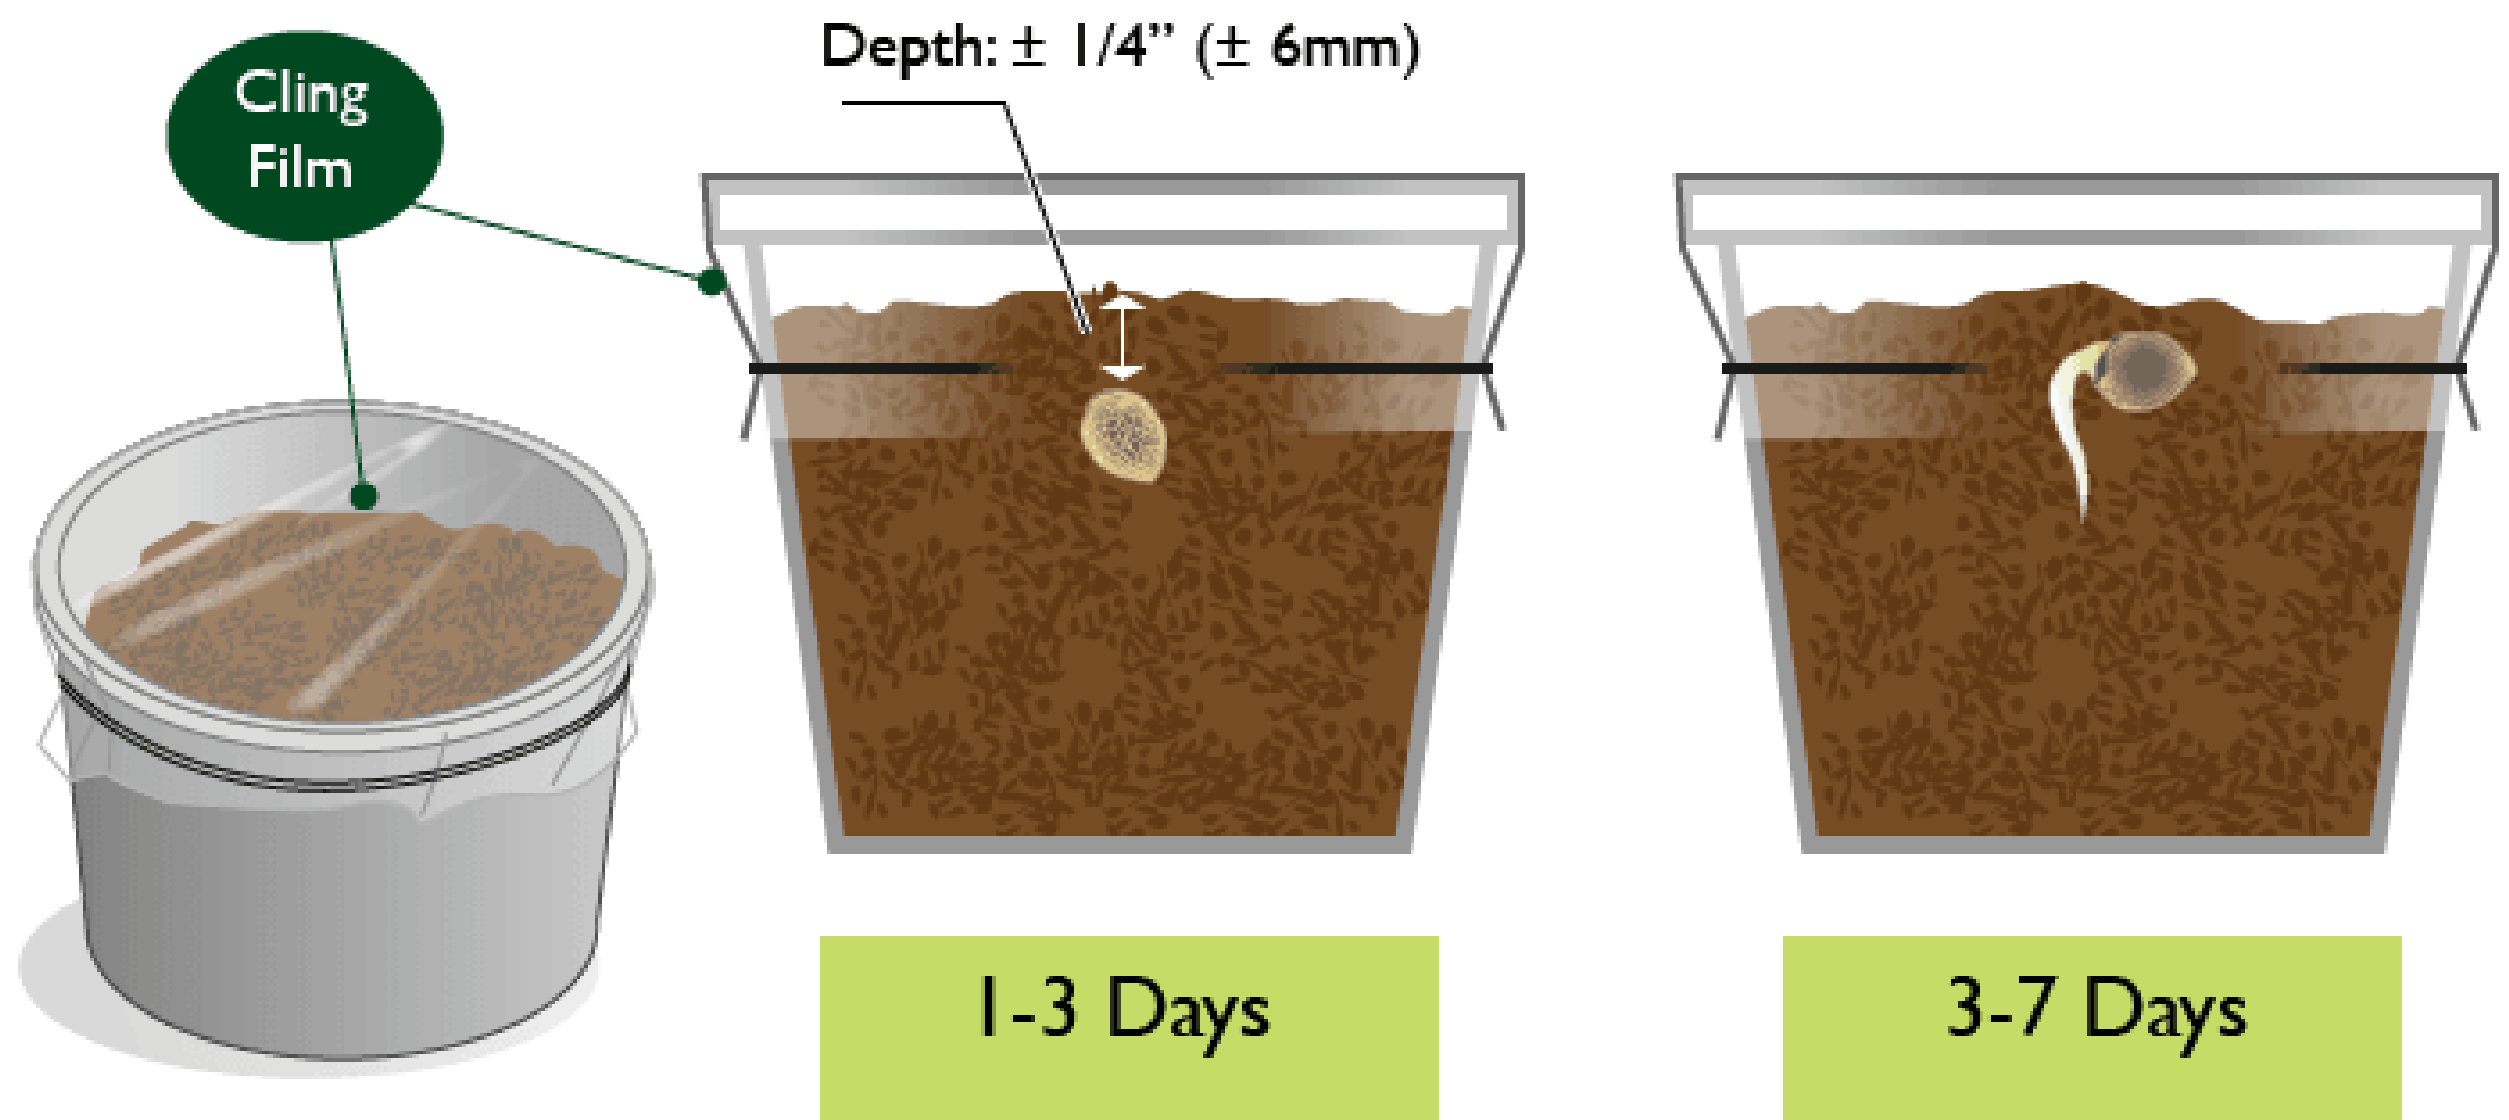

Once the roots sprout, the seeds are placed into a seedling tray or cup. When putting roots into the soil always keep the top on the same level as the soil surface.

Water 1-2 times a day, be careful not to let the soil become too dry or too wet.

Step 4. planting

When the seedlings are 10-14 days old, they should be transplanted into the planting bag which we prepared in step 1.

Step 5. Fish Amino

Start fertilizing when the plants are 14 days old. Mix 1 cc of fertilizer per 1 liter of water. Water the plants in the morning. When the plant grows larger you can increase the amount of fertilizer per day. Look at the color of the leaves. When the leaves become a lighter green than usual, you can increase the fertilizer.

Step 6. Bloom Booster

Fertilize with Bloom Booster when the plants begin to bloom. Or 1 week before flowering (depending on the strain). Fertilize once a week. 100 grams per week, for a total of 3 weeks.

Step 7. Harvest

Drying, Curing and Trimming are necessary after harvest. Trim off the leaves and hang the buds upside down in a dark room for 5 to 7 days.

Step 8. Post Harvest

After harvest, let's recondition your soil for the next crop! Remove the soil from the planting bag. Dry it in the sunlight for 5-7 days. Then mix the fertilizer with the soil. Use a ratio of 10 soil to 1 fertilizer (by volume). Then you will be ready to follow step 1 and continue the process again.

Happy Harvest!!
